TABLE OF CONTENTS

Foreword

With *Part II of " Notable Nativities"* I would like to introduce to you *Isaac Starkman* whom the reader should regard as my successor in continuing research in advanced astrology on a scientific basis.

In my experience the precise individuality of any natal chart hinges on the exact identification of its angles, not on mutual interplanetary aspects which remain very much the same for all persons born on the same day. Indeed for the slower planets some aspects may continue for weeks or even months.

Individuated characteristics also depend on the position of the Ascendant in a sign of the Tropical Zodiac. Interplanetary aspects that have no connection to angles or house cusps only become active when and if these aspects mature by progressed and regressed directions in the Secondary directional system.

My second purpose in this book is to demonstrate, as in *Part I,* that the methods described in my books *Prediction I, II,III* and in *Political Astrology* are not just occasionally valid nor do they require specially selected horoscopes, but are effective for any properly rectified radix.

As a recently discovered method of supporting a rectification analyzed with Primary directions in the Topocentric System, I would like to introduce to you *DUAL-TEST II* -- Secondary directions of precessed Solar Returns.

I wish to express my gratitude to all those astrologers who have shown an understanding of my endeavours and whom I did not mention in Part I :

Selma Polich de Eusebi, Eloy Dumon, Rubi Dumon, Arthur Blackwell, Michael Edwards, Gloria Pubill, Lourdes Mendez and *Beatriz Padron*.

I wish to thank *Michael Edwards*, for correcting my English grammar and syntax, and for providing some fruitful suggestions for the publication of this book.

Alexander Marr (Text and Delineation of Charts)

Symbols and Abbreviations used in this book

House Cusps and Planets of the Radix directed to Factors of the Radix

R - R

Radical Factors to factors of the Prenatal Epoch

R - E

Factors of the Epoch to Factors of the Epoch

E - E

Factors of the Epoch to Factors of the Radix

E - R

For Primary Directions : d = direct ; **c** = converse
(Using the Naibod key = 59' 08.33" per year ; see Prediction II)

For Secondary Directions : p = progressed ; **re** = regressed
(Using the Solar Arc in Right-Ascension for House-Directions)

SUN = SUN
MON = MOON
MER = MERCURY
VEN = VENUS
MAR = MARS
JUP = JUPITER
SAT = SATURN
URA = URANUS
NEP = NEPTUNE
PLU = PLUTO
P F = PARS FORTUNA
ANO = ASCENDING NODE
DNO = DESCENDING NODE
MC = MEDIUM COELI
ASC = ASCENDANT
DESC = DESCENDANT

Orbs are given in minutes of arc (round figures)
exact = Orb under 1' of arc

** Directions very characteristic of the event
* Directions which support the outcome of the event and its circumstances

The precondition for any serious astrological work is the determination of the true birth time. So far the best tools for this are precessional (sidereal) Lunar Returns.
(*Prediction I using Common and Prenatal Cycles*, pages 39 - 51)
If the number of available events is limited, the additional use of prenatal Lunars is indispensable.
The character of the event as well as the psychological experience of the native are denoted by the angularity of appropriate planets. In other words, you will not find planets which do not suit the nature of the event on any angle of the different precessed Lunars. As the operational periods of the different precessed Lunars vary, a precondition for their analysis (and also for prediction) is the use of the *Overlap Method.*
(*Prediction I using Common and Prenatal Cycles* , p. 90)
Depending on the number of events and Lunars that are analyzed, it is possible to identify the birth time within a few minutes of time, the equivalent of one to two degrees of RAMC. Natal charts secured in this way can be analyzed, utilizing all tools presented in Prediction I.
To arrive at a more precise result, the ASC-Lunar (the lunar return of the Conception horoscope) may be used. (Prediction III, p. 31 -51)
The most reliable method, however, easier to handle and more reliable than a rectification with the ASC-Lunar, is an analysis with Primary Directions in the Topocentric System. The validity of a rectification with Primary Directions depends on the following:

1. The orbs of the directions should not exceed
   a) 10' of arc for conjunctions and oppositions
   b) 5' of arc for the other effective aspects (trine, square, semisquare, sesquiquadrate, sextile, semisextile and quincunx). All other aspects should be ignored.

2. Initially the rectification should be performed with angular directions. The angles are directed, both direct and converse, to radical planets.

3. After a few angular directions with the appropriate symbolism have been found, all pointing to the same radical RAMC, an analysis with directed house cups should confirm this assumed RAMC.

4. The final proof of the result will then be interplanetary directions and planetary directions to angles and house cusps.

A proposed rectification can be classified in one of four ways:
a) The result is excellent and there is no doubt about its correctness. This should be the case if a large number of events is available.

b) The result is still convincing

c) The result is doubtful

d) The result is definitely wrong.*

*If there are:
1. Not enough angular and house cusp directions for main events.
2. The orbs of the directions are in many cases too large.
3. A doubtful symbolism has been used.

The rectified charts presented in this book should provide useful examples for those readers who wish to experiment with this advanced rectificatio method. Without exception, in well over 300 rectifications, no close-fitting VIII cusp directions have been found for the death of the native himself. This has again and again backed up my claim that the VIIIth cusp symbolizes only the death of relatives and friends, sometimes connected with inheritances. Each cusp has a certain symbolic relation with its opposite cusp, such as: ASC= personal events; DESC.= partners, opponents. The IInd cusp, which undoubtedly symbolizes money and property, could not possibly have an opposite cusp symbolizing the death of a native. Instead, the ASC and the IC afflicted preferably by malefics, are always characteristic of an individual's death.

While there have been no traces of the VIIIth cusp in connection with the native's death in Primary Directions, in cases where the native was the victim of a murder, transits and prenatal transits gave conclusive answers (John F. Kennedy).

Having studied astrological symbolism for over 40 years, I came to the conclusion that there are still two planets to be discovered. One for VIRGO (jobs, employees, rote method, compulsive precision), as the counterpart of PISCES and NEPTUNE ; the other for LIBRA (contracts, air and space travel, equilibrium overcoming the force of gravity) as a counterpart of ARIES and MARS.

The statements of the ancients giving the Luminaries one and the planets two signs are overruled by the fact that three new planets have been discovered since.

On the other hand, the true symbolism of planets and the tropical signs cannot possibly allow any planet to belong with a second sign.

For instance: SATURN is incompatible with AQUARIUS as well as with URANUS. JUPITER "the judge" has nothing in common with PISCES or NEPTUNE. MERCURY "the lawyer" has nothing in common with VIRGO. Furthermore the masculine planets become feminine, and vice versa, if one follows the traditional rules. CHIRON, carefully tested in rectified charts, does not produce any truly effective directions in the Primary as well as Secondary directional systems. The omission of two still undiscovered planets could be the reason for the lack of MDO congruencies, both for rule 3 and 3a, in about 20 percent of cases analyzed.

So far, in over 60 cases, the coordinates of the birthplace have also been valid for the conception horoscope (prenatal epoch). This is also the case for President *Franklin D. Roosevelt* , of whom we know that conception should have occured when his parents were on a tour in France. Additional cases in which the place of residence during conception differed from that of the radix should give us the answer.

Conclusions

The basis of astrology's revolutionary development into a science consists of this: in any well handled horoscope, there is a chain of results which progressively multiply the factor counting against coincidence; one then attains near-certainty.

In the analysis of past events as well as forecasts, directions must be confirmed to the highest degree by precessed Lunars and Transits.

Some astrologers obviously err in their approach to astrology.

They regard astrology as an art, neglecting the fact that

a) Astrology --if not mutilated and swollen by fictional factors which cannot be verified--is already a science in an empirical sense; for there never has been any doubt about the symbolism of the planets, the efficacy of angles, etc.

b) Astrology becomes a real science through measurements which in most cases obviate coincidence.

Astrology has been considered an art by some astrologers because no visible progress has been made in this science for centuries.

I agree, however, that up to the development of Primary directions in the Topocentric system, with the revolutionary finding of the Conception horoscope and the Dual-Test, it was not possible to verify the power of astrological directional factors.

This is already a first step towards cautious, modest prediction. As I have reiterated, forecasts of events are amply justified and are likely to succeed if not only the horoscope of the native, but also those of his relatives and friends, have been properly studied.

Valuable astrological systems with a solid astronomical background

The writer states with satisfaction that most of the principles of traditional astrology, at the higher level, can nowadays be regarded as confirmed

One of the most important questions which have been raised by the writings of *Cyril Fagan* is :

Which of the two astronomical systems in natal and directional astrology is valid and which not -- the sidereal or the tropical Zodiac ?

Extensive research indicates that astrologers have been on the right path, at least since the golden age of Greek science (around 400 B.C).

I believe the following should be valid without execeptions :
In all those cases where astronomically correct astrological systems are applied to the natal chart or to the conception horoscope, the positions and measurements of the traditional tropical Zodiac are valid.
This not only concerns transits and directions but, strangely enough, also precessional (sidereal) Solar Returns. Here directions in the secondary directional system , mainly conjunctions, prove the general law favouring the tropical Zodiac. Details for this special case will be found in
Prediction I using Common and Prenatal Cycles **, p. 23 - 38 , and** ***Political Astrology*** **, p. 32 -34.**
The writer does not doubt that for the delineation of a natal chart too the tropical Zodiac is valid. This is, of course, so far only an empirical statement, but it is based on the practice of traditional astrologers over centuries.

Cyril Fagan found the origin of the zodiacal signs as known to the ancient Egyptians. This could be a serious matter, because it conflicts with undoubted research results obtained in old and modern times. On the other hand it could be that Old Egyptian astrology - in the writer's opinion considerably overrated - had its origin in cultures such as the Phoenician, Syrian or Babylonian, which may have established astrology on a tropical base.
It is very likely that the sidereal system, which is very exotic in comparison with the tropical System now in use, reflects mass catastrophies, where traditional rules for individuals do not work.

The few astrologers who are still trying the efficacy of the sidereal Zodiac in connection with natal charts would do better to work on mundane charts such as the Sidereal Capricorn Solars. This is likely to teach us how mass catastrophies are convincingly reflected in astrological maps.

The astrological systems demonstrated in *Prediction I using Common and Prenatal Cycles* are all valid to determine approximate birth times. For refined rectification, special methods and directional systems have to be used which are explained in *Prediction II* , and for the Dual Test* in *Prediction III*.

The Solar-Arc method (in eclipto) is pure fiction; unfortunately it is still very much in use, as is the Uranian System based on non-existent hypothetic Trans-Neptunian planets.

As all planets discovered so far obviously have variable latitudes and the hypothetic planets have not, followers of this system, undergoing qualified criticism, had to change their name to that of the so-called "hypothetic sensitive points".
They mix these points and real planets to create five thousand Arabic points on the Zodiac. The result is interpretation with a clearly wrong symbolism and other defects which violate statistical laws of coincidence and defy logic (See : Prediction III, p. 92, *Fictions in Astrology*)

Another problem is the interpretation of transits and prenatal transits. Here books of some hundred pages,with detailed recipes for all planetary combinations and all major and minor aspects, are of no use because these recipes are more the product of phantasy than of serious research. However, the writer warmly recommends *Reinhold Ebertin's Combination of Stellar influences,* which is so far the best tool for learning the symbolism of luminaries and planets, and how to predict that a day will be favourable or unfavourable. Of course the midpoint technique presented therein has to be used with caution and preferably in connection with rectified radices.

The Dual Test

developed by the writer in the early 80s and applied to most nativities in this book has to be regarded as a revolutionary discovery. It improves the Topocentric directional system considerably, and provides, even without any statistics, ample proof of the scientific character of astrology. In other words, the struggle to eliminate coincidence in rectification should come to an end if the newly-developed tools are handled properly.
By applying Rules 1,2,3 and 3a one progressively reduces the chance that a rectification is confirmed merely by coincidence.

The true rectification is the most difficult part of natal chart analysis. It is based
(a) on small orbs; 5 minutes of arc for all aspects , 10 minutes of arc for conjunctions and oppositions and
(b) the true symbolism of luminaries and planets.
In view of the characteristic directions for main events which rapidly accumulate when a chart is properly rectified and studied, ruler and dispositorship have to be neglected.

RULE 1

The Ascendant or Descendant of the radix should be identical in eclipto with the MOON of the Prenatal Epoch; the orb should not exceed a few minutes of arc. So far the average orb (arithmetical mean) has been 2 ' of arc.

RULE 2

The MOON should be waxing or waning in both charts. We found exceptions in charts where the Moon was almost FULL or NEW .

RULE 3

In most cases there are congruencies in the Meridian distances in OA or OD **(MDO's)** between the radix and the Epoch.

RULE 3a

There are MDO congruencies between the native and his relatives (genealogical connections) and friends

Astronomical co-ordinate systems used to further test a refined rectification in accordance with the native's character and destiny

1.) Meridian Distance measured upon the Equator (MDO's)

This allows us:

a) To find MDO congruencies between radix and prenatal epoch.
Rule 3

b) To find MDO congruencies between the horoscopes of native, relatives and friends.
Rule 3a

This **equatorial system** also allows comparison of horoscopes with different geographical co-ordinates.

Formula : Meridian Distance **(MD)**; devided by Semi-Arc (**SA**) multiplied by **90** degrees.

Hence, comparison of different horoscopes in terms of MDO congruencies is not only possible but most revealing, even though in almost all our cases births occured under various northern or southern latitudes.

MDO congruencies also appear between radical positions and transits for events timed to seconds (see Marr, A. Prediction II pp. 41-46).

2.) Oblique Ascension and Descension (OA / OD)

OA's and OD's refer to an **ascensional system** and require the precondition of identical geographical co-ordinates. They have prime importance for the native's destiny and reflect positive or negative events of similar character throughout life (see Marr, A. Prediction II p. 115 ; also Charles de Gaulle in this vol.).
While MDO congruencies are demonstrated in nearly all horoscopes in both volumes of this book, OA/OD congruencies should offer further proof of the refined rectifications published in the writer's works.

QUEEN ELIZABETH II. -- Several dozen tests, some using events analyzed after Nelson Page's rectification of 1963, verify that she was born :
1926, April 21, 01h 12m 48s U T (Caesarean section).

OA MARS rad 339º 13' **conj.**
OA JUPITER rad 339º16'

GEORGE V

OA VENUS 26º 30' **opp**
OD MOON 176º 34'

EDWARD VIII

OA MARS 3º 28' **conj**
OA NODE 3º 32'

PRINCE CHARLES

OD JUPITER 249º 46' **opp**
OA URANUS 69º 37'

PRINCE WILLIAM

OD JUPITER 208º 37' **conj.**
OD PLUTO 208º 49'

WILLIAM II, Emperor of Germany

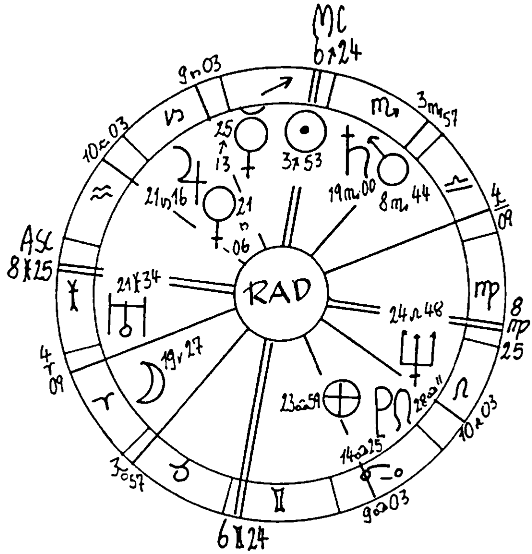

OA SUN 323º 36' **trine**
OD MOON 203º 30'

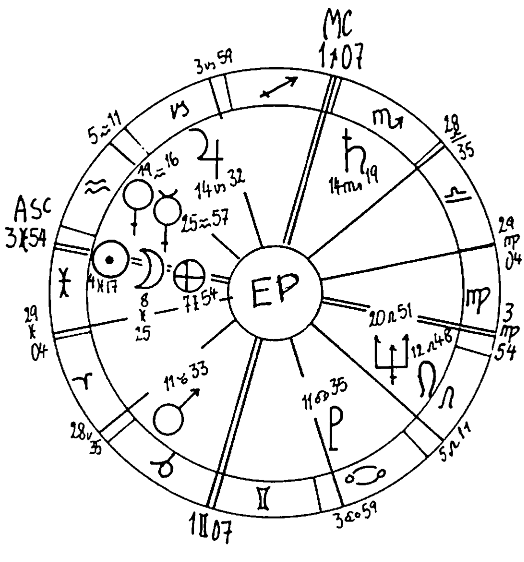

Although we may not always detect the highlights of the native's life, or his constant misfortune in certain matters, quite obviously the OA/OD congruencies in the royal radices listed above indicate accession to the throne .

On the same basis those monarchs with harmonious OA/OD congruencies enjoyed a normal reign, whereas Edward VIII was obliged to abdicate soon after his father's death, due to the strength of adverse public opinion against his liaison with Mrs Wallis Simpson which he was unwilling to break off, shown by the tight OA conjunction of MARS and NODE.

It is highly likely that Prince William will one day accede to the throne. Prince Charles too, though recently the subject of gossip and scandal, could soon become King.

Research has revealed in some twelve cases that directions, exact to the day, of progressed or regressed MOON mainly to the radical IC, or ASC, coincide with the native's. death.
Secondary lunar directions of similar precision constitute further impressive evidence supporting these rectifications.

Main Characteristics of Blackwell's Radix and Epoch

As often happens , the radix shows fewer individuated characteristics than the prenatal epoch.
The malefic fixed star PRINCEPS (2 Scorpio 21) conjoins the MOON (2 Scorpio 18)
The square of SUN to PLUTO, a non-individuated aspect, may have some efficacy, as the SUN applies close to exact.
Wholly individuated and unfortunate is the mundane square and paran :

URANUS RA +90º	=	151º 18'
PLUTO setting	=	151º 04'

The powerful epoch is aptly characterised by five angular planets whose closeness to MC, IC and ASC makes them entirely personal in nature.

RAMC ep	**= 305º 44'**	
RA MOON	= 302º 48'	paran
RA VENUS	= 307º 42'	paran
RA PLUTO + 180º	= 307º 46'	paran
URANUS rising- 90º	= 306º 42'	paran
SATURN rising - 90º	= 305º 34'	

The closeness of the angular VENUS-PLUTO paran, both planets almost in mundane conjunction (orb 4'), points to cancer in the neck area.
So far about some twelve cases indicating cancer, especially of the neck, have been noted with this VENUS-PLUTO combination. The author, who suffered with cancer of the larynx in 1973, had a similar VENUS-PLUTO combination, configured with ALGOL, a most evil prominent fixed star. In Blackwells' case ALGOL plays a leading role in ecliptical conjunction with ASC ep :

ALGOL = 25 Taurus 22 (Taurus : neck)
ASC ep = 25 Taurus 29

Also most unfortunate is the tight angularity of rising SATURN conjunct URANUS, especially as regards illness.

Gloria Pubill

The orbs, in brackets, suggest a birth-time a few seconds later, as do the radical MDO congruities with those of the author.

Main Characteristics of Pubill's Radix and Epoch

The potently individuating FULL MOON across angular houses 1 &7 envigorated her with the energy and desire for great undertakings. Her immense capacity for work found expression not only in her profession, but also in the standard of her astrological journal in which she published her Spanish translations of outstanding articles. Benefic and of low latitude, the prominent fixed star PELAGUS (11 Capricorn 35) on the MC (11 Capricorn 53) makes up for the absence of an angular planet.

JUPITER (21 Gemini 18) conjunct the 3rd Cusp (20 Gemini 56) gives success in writing and publication.

PLUTO close to the 5th cusp may have denied her children and the prenatal epoch shows a very unfortunate conjunction.

The most decisively negative characteristic feature of the radix is the mundane square :

MARS OA = 89º 53'

NEPTUNE OD = 179º 54' orb 1'

In most cases mundane aspects, particularly of such precision, produce negative outcomes in several spheres of life, of which here we have no details.

Similarly, in the prenatal epoch we find :

MC = 29º Tau 08' RAMC= **56º 55'**
SATURN = 27º Tau 00' RA= 55º 13' **MIDPOINT 56º 55'(exact)**
URANUS = 29º Tau 46' RA= 58º 38'

Many cases show that two such incompatible planets on an angle tend to threaten health and even life itself.
JUPITER, angular in the 10th house, perhaps helped the native avoid the worst, but its non-individuated detriment(in the 10th but not on the angle) should deter us from speculation.
MARS (14 Aries 28), though not prominently placed between cusp 8 and 9, casts a negative influence with a tight semisquare to the MC (29Taurus 08).
VENUS rising, ruler of the MC, may have contributed to her success in life.
A close sextile (orb 17') of MARS to JUPITER may also have enhanced her reputation.
Another negative, fateful factor of some importance is the conjunction of the malefic fixed star ALCYONE(29 Taurus 01) with the MC (orb 7').

The birth time of William II was for a long time uncertain. Astrologers around 1900 repeatedly published a completely wrong time. Some two years ago a German historian established beyond doubt that the birth with complications, took place at about 09.00 LT.

Main Characteristics of William II's Radix and Epoch

As on occasion stated, the prenatal epoch often shows more characteristics of the natives life than the radix.

The Prenatal Epoch shows a tight Grand Trine of MARS, SATURN and NEPTUNE. Though it consists of three malefics, their trine alleviates the unfortunate angular position of SATURN and NEPTUNE. As often observed SATURN, harmoniously aspected and angular, preferably rising, can confer longevity. William II attained an age of 82 years.

RAMC ep	357º 39'	
RA NEPTUNE	355º 14'	**angular Paran**
SATURN rise - 90º	354º 03'	

The Radix shows a most fortunate midpoint combination on the MC : MERCURY/VENUS = MC (within half a degree).

MARS squares VENUS , to signify the Emperor's misfortune in war activities, which brought his downfall when he lost World War I . Bad decisions, mainly in foreign affairs, are shown by MERCURY sesquiquadrate URANUS.

The MOON(24º Scorpio13') opposing ALGOL(24ºTaurus12'), to just 1 'of arc, may have influenced his life, but the writer has yet to finally confirm any clear significance of planetary oppositions to fixed stars .

Emperor Franz Joseph 1848-1916
1830- 1916

Main Characteristics of King Hussein's Radix and Epoch

The dominant features in Hussein's radix are:
MOON (4º Cancer43') conjunct MC (4º Cancer 41') Orb 2' of arc
VENUS(4º Libra 07') conjunct ASC (4º Libra 22') Orb 15' of arc
This combination forms the following powerful Paran:

RAMC	= 95º 06'	
MOON RA	= 95º 10'	**paran**
VENUS rising - 90º	= 94º 38'	

This most benefic and dynamic aspect probably saved his life in the several assassination attempts in which some of his relatives and friends died. He escaped unhurt when his plane was attacked.

JUPITER on cusp 3, thus opposite cusp 9, also protected him during the frequent flights he piloted. Furthermore, he enjoyed much success in domestic and foreign affairs, and after his coronation in 1953 he reigned for 40 years. Of his family life we know little. He married four times. No serious problems seem to have marred his relationship with women.

The prenatal epoch shows few features relevant to his personal life and psychology.

VENUS elevated (24º Pisces 20') trine PLUTO (24º Cancer14') in the first house promises a fortunate stability in most matters of importance to him. Any conflicts in his sex life may have arisen from MARS (cusp 5) square PLUTO (cusp 1) - orb 10'.

William Gladstone
1809-1898

W.G. told the Editor of *Modern Astrology* that he was born about breakfeast time. *Friedrich Schwickert* rectified this to 7h 59m Local Time = 8h11m GMT)

Main Characteristics of Gladstone's Radix and Epoch

The natal chart shows a dominant URANUS near the MC. As repeatedly stated, most famous historical figures have either planets or fixed stars close to an angle of the horoscope.

In Gladstone's case URANUS culminates within 3 degrees of the MC (9ºScorpio42'), while the first-order benefic fixed star ACRUX conjoins the MC. ACHERNAR (12ºPisces35') a benefic fixed star of equal power, conjoins PLUTO (13ºPisces55'). URANUS, signifying intuition and sound instinct, forms a close harmonious aspect to PLUTO (orb 46'). The radix shows no essential planetary afflictions, though SATURN conjunct NEPTUNE in the 11th house echoes the envy and intrigue surrounding his political life. Not surprisingly NEPTUNE often appears in directions indicating his defeats and resignations. Gladstone's relatively long life reflects the general aspectual harmony in both radix and prenatal epoch.

*** In all radices and prenatal epochs so far studied no 8th cusp directions have been noted at the native's death from accidents, illnesses or old age, though assassination may be a different matter. Indeed logically, since the 8th house opposes the 2nd house (money, personal property), it cannot generally signify the native's death. Rather, as a sufficient number of rectifications have demonstrated, it shows inheritance. See Marr, A. " Prediction II", p. 26 : *"Death of the Native Himself"*.

Precessed Solar Return Directions
Dual Test II

A new method of checking the reliability of Dual Test rectifications came as a surprise about two years ago. It enabled me to solve a problem that had bothered me for thirty years. Why did Solar Return directions computed in the Tropical Zodiac not always coincide with appropriate events ? The undoubted solution which greatly exceeded my expectations, lay in secondary Solar directions (one day equals one full solar year).

Computation of the true time of any precessed Solar Return, whether by computer or from an ephemeris, is not sufficiently accurate. Each second of arc in solar measure equals 25 seconds of time. We are thus obliged to accept errors in Solar Returns of at least 25 to 50 seconds of time, that is 6 to 12 minutes of arc in right ascension. This obliges us to ignore directions of angles and house cusps to planets.

Doubtful rectifications of radix and epoch, performed mainly by primary directions, can now be confirmed or rejected by secondary directions in the precessed Solar Return. This works even with a limited number of available events. As a further advantage these secondary directions do not depend on the place of residence.

To reduce the number of possible directions the writer recommends use of the following most effective combinations only :

Radix to Radix (R-R) and Epoch to Epoch (E-E), both common and prenatal (i.e. direct and converse).

Precessed Solar directions only function, within reasonable orbs, if the Tropical Zodiac is used for radix, epoch and precessed Solar Return. Needless to say, they also provide further proof of a refined rectification by primary directions (Dual Test I).

Adolf Hitler continued

Key Characteristics of Hitler's Radix

Radical MERCURY makes a tight mundane conjunction with the DESCENDANT setting within 22' of arc. This Mercury in Aries stands out as the most powerful significator of Hitler's talents, career and psychological reactions. Such oppositions to the Ascendant are as effective as conjunctions. His skill as a persuasive speaker, though in the manner of a demagogue, with his intolerant Arian attitude in private life as well as in public debate and political negotiation, characterize Hitler's whole career, especially after 1919.

The Ascendant is usually the dominant radical index of character and habits, provided it lacks essential planetary aspects; his Ascendant in Libra here characterizes Hitler's natural tendencies only in the quieter periods of his life. It is well known that before he became active in the National Socialist Party in 1919 Hitler showed neither drive nor any ambition of note. During World War I he is said to have been a disciplined soldier. The first thirty years of his life are characteristic of an Ascendant unactivated during this period.

David Ben Gurion

Main Characteristics of de Gaulle's Radix and Epoch

A comparison of radix with epoch reveals this MDO congruency

MDO PARS FORTUNA rad 24º 40' III. Quadr. **conjunction- MDO congruity**
MDO MARS ep 24º 31' III. Quadr. **measured on Equator**

What is more, we find a significant radical OA/OD congruency repeatedly characterised by A.P. Nelson Page as destiny-making **:**

OA SUN rad = 250º 06' **benefic sextile , orb 1' : mundane OA/OD**
OD MARS rad = 310º 07' **congruency in ascensional measure**

These two positive congruencies with MARS clearly characterize de Gaulle's brilliant career as both military commander and political leader.

Likewise of prime importance is the radical mundane square **:**

JUPITER RA - 90º = 219º 29'
URANUS OA +90º = 220º 27'

This JUPITER-URANUS combination led de Gaulle instinctively to the right decisions at the right time.

These three mundane aspects of such remarkable exactitude depend entirely on rectification to seconds of time of both radix and epoch, in contradistinction to charts based on inaccurate birthtimes, sadly still, as in the past, delineated on the basis of non-individuating planetary aspects.

De Gaulle survived three assassination attempts, shown by the prominent fixed star of evil nature POLLUX (21º Cancer 32') on the radical MC (22º Cancer 11'). His relatively lucky horoscope saved his life.

We find a similar MC position in the radix of **J.F. Kennedy** , who was assassinated : MC = 21º Cancer 44' ; POLLUX = 22º Cancer 04' .

Mahatma Gandhi, also assassinated, had a conjunction of POLLUX with URANUS close to the MC .

MC = 27º Cancer 21' ; URANUS = 21º Cancer 41 ; POLLUX = 21º Cancer 25' .

A significant radical congruency in OA(OD). (explained on page (?))

OA SUN rad 250º 06' **benefic sextile, orb 1'. Mundane OA/OD**
OD MARS rad 310º 07' **congruency in an ascesional measure**

Main Characteristics of Rabin's Radix and Epoch

Rabin's moderate and well considered decisions in domestic and foreign politics derive from JUPITER (17º Libra 48')
trine MERCURY(16ºAquarius21') which augments and balances the fortunate close mundane conjunction of JUPITER with cusp 3, opposite cusp 9:

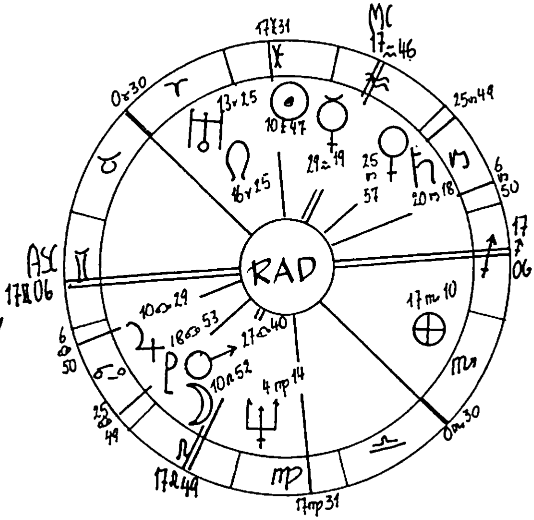

JUPITER OA 3 = 198º 09'

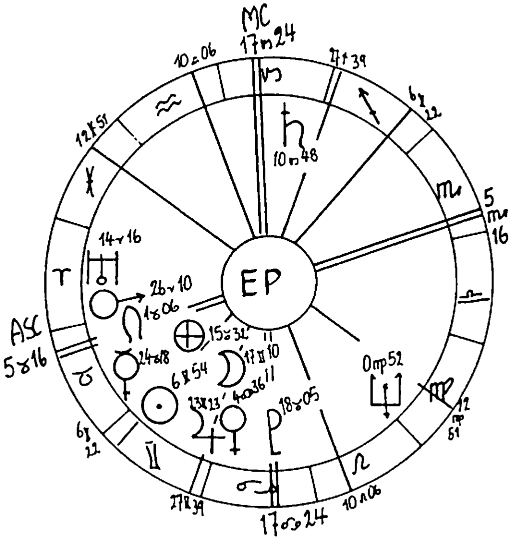

Cusp 3 OA = RAMC + 150º = 198º 02'

PLUTO (8º Cancer 02') exactly conjoins ALHENA (8ºCancer02'), a prominent fixed star of first magnitude.

The prenatal epoch exhibits more dynamic characteristics than the radix, with MOON and URANUS elevated, close to the MC.
REGULUS (RAIC = 151º 03'), the prominent fixed star of rulers of state, conjoins the IC (RAIC = 151º24'), orb 21'.
MARS trines a powerful URANUS, but is weakened by conjunction (orb 3') with DIRAH (4ºCancer12'), a prominent fixed star of malefic and destructive nature, which accounts for the several setbacks suffered by Rabin during his administration.

Main Characteristics of Gorbachev's Radix and Epoch

The Radix shows a very close trine of 10th house SUN to 2nd house JUPITER (orb 18').
The MOON is well aspected by a close semisextile from JUPITER. MERCURY elevated in the 10th house in Aquarius, the reforming sign, is the dominant radical planet.
Equally important is the angular MOON on the IC, envigorated by the SUN in tight quincunx (orb 5').
VENUS within 8' of cusp 9, reinforced his position in domestic and foreign politics. However the close opposition of MARS on cusp 3 (domestic politics and propaganda) to VENUS on cusp 9 precipitated his downfall in 1992.

The prenatal epoch shows a strong, healthy SATURN in domicile in Capricorn, in the 9th house but angular, with no aspect of note.
PLUTO, within one degree of the IC in both longitude and right ascension, has no latitude, strengthening the close opposition to the MC and denoting Gorbachev's political reform.

Mainl Characteristics of Eisenhower's Radix and Epoch

Radix and Epoch appear very powerful with seven angular planets in both charts : SUN ; MOON(2) ; VENUS ; JUPITER ; URANUS(2).

RAMC rad	121º39'	RAMC ep	18º50'	
URANUS rising - 90º	121º36'	URANUS ep RA -180º	17º23'	paran
MOON rising - 90º	122º10'	VENUS ep set. + 90º	19º35'	
JUPITER RAMC +180º	125º14'	MOON ep RA	26º28'	paran
		SUN ep set. + 90º	26º29'	

ALTAIR, a first magnitude benefic fixed star conjoins the radical IC and epoch descendant within a degree.

MERCURY rad trine JUPITER rad (orb 20') : optimisme, objectivity.

MARS rad trine SATURN rad (1º) : stability in military strategy.

MOON rad conj URANUS rad (1º) : Instinctively good decisions.

MERCURY in radical grand trine with JUPITER and with PLUTO conjunct NEPTUNE sharpened his instinct, promising him a happy life and successful career.

George Bush (President 1989-1993)

Alexander Marr

In June 1990 when President *George Bush* was at the peak of his success, the writer made the following forecast:
(AFA Bulletin, 22 Jun 1990):

" *I invite the reader to analyze the date of the next presidential election in November 1992, as well as the Inauguration, January 20, 1993.*
Here the astrological indications are very much unfavourable for a re-election. "

<u>Main Characteristics of Blavatsky's Radix and Epoch</u>

The predominant radical planet is NEPTUNE descending within 48' of arc, symbolising perfectly her fame as a theosophist.
Angular VENUS supports NEPTUNE :
RAMC = 358º 17'
NEPTUNE OD + 90º = 359º 05' **paran**
VENUS RAIC + 180º = 362º 29'
The VENUS-NEPTUNE paran typically indicates a charitable person. MOON opposition PLUTO apparently heightened her sensibilities and, coupled with a harmonious aspect from URANUS, raised her enquiring mind to a higher degree. Great potential powers find their expression in a most positive opposition of SUN to JUPITER.
This is on the whole a fortunate radix, though with high tension and powerful impulses. Unfortunate events, as observed in both directional sys- tems, arose from the close conjunction of MARS and SATURN (orb 8').
Primary directions (see list of events), simultaneously within reach of angles, house cusps or disharmonious planets, show illnesses, accidents, even her death.
The prenatal epoch reaffirms the fortunate career of this remarkable woman, mainly through an elevated JUPITER within three degrees of the MC. Here again we find true charity in an almost exact VENUS trine NEPTUNE, both planets supported by aspects from SUN, MOON and MERCURY. Also of some importance is the sextile of URANUS to PLUTO, within one ecliptical degree, raising tension and sensibility. WEGA(12º Capricorn 56'), a bright and benefic fixed star of the first order, conjoins the MC
(13º Capricorn 48') within one degree. SCHEAT, a fixed star of the second order, conjoins MARS within 3' of arc. NORTH SCALE, a neutral fixed star of the second order, conjoins VENUS within 12' of arc. BUNGULA, a most benefic fixed star of the first order, conjoins the SUN within half a degree.

Main Characteristics of Mahler's Radix and Epoch

Mahler's talent for musical composition is mainly signified by an angular NEPTUNE in both radix and epoch.
The epoch is more indicative of Mahler's character than the radix, with NEPTUNE elevated to within three degrees of the MC and trine JUPITER on the rising angle, forming the prime mundane combination :

RAMC ep	358º 21'	
RA NEPTUNE ep	356º 27'	paran
JUPITER ep rise -90º	355º 40	

Marie Curie
1867 – 1934

Radix rectified: 1867, November 7 12h05m20s 21E02 ; 52N13
Epoch rectified : 1867, February 17 15h16m53s " "

No recorded time of her birth.

Main Characteristics of Marconi's Radix and Epoch

Eight planets on the east side of the natal chart signify Marconi's tireless efforts to develop his inventions, especially his remarkable extension of radio waves up to the short-wave band.
His ingenuity is shown by the trine of MERCURY, semisextile MC (orb 20'), to URANUS, with JUPITER semisquare URANUS.
VENUS and PLUTO also apply their creative trines to JUPITER, while VENUS in the 11th house, two degrees from the trine, secured Marconi a host of supporters. However PLUTO, whose mundane position falls in the 12th house by nine degrees, caused much litigation, mainly over infringement of his patents.
His lack of speaking and lecturing skills is indicated by SATURN opposition cusp 3, to 14' of arc (17' in mundo).
The MOON applies by sextile to ASC and JUPITER, broadcasting his success worldwide.
His heart trouble which eventually caused his death at the age of 63 is mainly characterised by the midpoint combination: ASC = SUN/URANUS (orb 23').

The prenatal epoch again shows an extrovert personality, with seven planets on the east side of the chart reinforcing the radix with an angular JUPITER on the IC.
VENUS elevated improves his personal and private life. SUN closely opposing SATURN may have caused some shyness when addressing audiences. It may have hindered his sex life too.

These examples show that a serious and thorough delineation of both radix and epoch, free of fictional notions and false judgements, only becomes possible if the horoscope is rectified to within seconds of time. In addition, the prenatal epoch frequently exhibits more features of the native's character and destiny than the radix.

Main Characteristics in Wilde's Radix and Epoch

Oscar Wilde's main radical aspect is MERCURY in trine to NEPTUNE descending within half a degree, typically symbolising a novelist.

DESC OD = 335º 23' **(orb 11')**

NEPTUNE OD = 335º 12'

Angular MARS on the IC quincunx 10th house PLUTO (orb 1º) is supported by no other exact aspects, though VENUS trine MC (orb 1º enhances his literary talents.

The prominent fixed star ACHERNAR (13º Pisces15') forms an ecliptical conjunction with the DESC (orb 10') and conjoins NEPTUNE within 2' of arc.

URANUS trine JUPITER, sextile NEPTUNE and opposition MERCURY, also characterises his talent for writing.

ALDEBARAN (7º Gemini 46'), a prominent fixed star of violent nature, conjoins the MC (7º Gemini 12'). The MC reached it by precession = +34' of arc when Wilde was sentenced to two years hard labour in 1895, at the age of 41.

Thus :

41 years = 34' of arc. MC = 7º Gemini 12' + 34' = <u>7º Gemini 46'</u>

Malefic RIGEL (14º Gemini 48') conjoins SATURN (15º Gemini 35'), signifying imprisonment, while benefic SPICA (21º Libra 49') conjoins SUN (22º Libra 26'), signifying fame.

The radix is far more characteristic of Wilde's life than the epoch,where the main significator is the SUN rising within 6' of arc. Note also URANUS conjunct cusp 3, informing his writings with intuition and sound instinct.

Main characteristics of Charlie Chaplin's Radix and Epoch

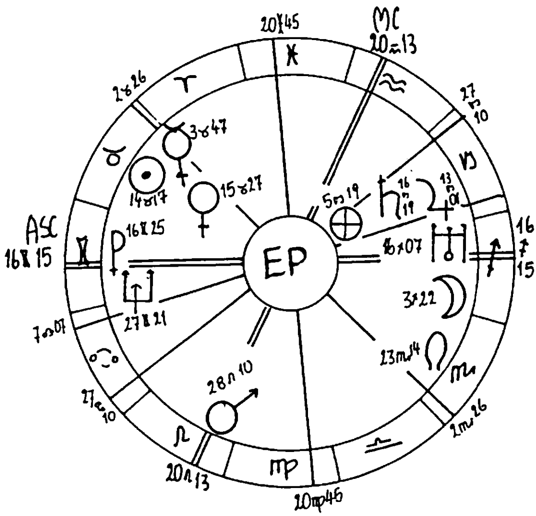

The radix shows a dominant MOON on the ASC, closely trine JUPITER. The MOON's swift apparent motion individuates this aspect.
But MARS and SATURN near angles and in quite close square ought to have afflicted his life with decisevely unfortunate events, as we see in the radix of *Adolf Hitler* who was born within four days of *Chaplin*.

This is one of many thoroughly tested examples showing that the radix does not disclose the whole of the native's destiniy. Instead, as here, the prenatal epoch often exhibits more revealing characteristics.
This underlies the frequent tendency to overrate natal delineations, many of which sadly resort to fiction and fantasy.
In this case, as we shall later see, the rectification of Chaplin's horoscope may be regarded as scientifically proven, especially in the light of pinpoint sharp Solar directions of planets to angles.

The prenatal epoch is much more characteristic of Chaplin's successful career, talents and plethora of honours.
SUN in XI conjoins VENUS (friends, promotion, protection) and closely sextiles the MC. Angular JUPITER falls within one and a half degree of the IC and receives close trines from SUN and VENUS, the latter to just 9' of arc. Experience shows that such tight aspects play a decisive role in the native's destiny.
Angular NEPTUNE boosted Chaplin's talent for acting and scriptwriting. MERCURY'S close square to URANUS (orb 4') seems to have stimulated his powerful intuition.
However MARS and SATURN near angles in a quite close square should have caused decisive negative happenings as they did in Adolf Hitlers radix, who's birth happened to be within 4 days of Chaplin's. In fact they did not.
This is one of already many tested examples that the birth chart does not show everything of the natives destiny. Instead, as here, the prenatal epoch often disclose much more characteristics.
Of this reason the delineations of birth charts are often much overrated and therefore unfortunately full of fantasy and fiction.
In our case , as we will see later, the rectification of Chaplin's chart may be regarded as a scientific proof, especially what concerns the razor sharp Solar directions of planets to angles within 1 ' of arc.

Main, Characteristics in Lindbergh's Radix and Epoch

Both radix and epoch are very hard to interpret.
Note the fixed star DENEBOLA (20 Virgo 16) conjunct the radical MC (20 Virgo 53). URANUS in the first house square the MC further testifies that this planet, indubitable significator of Lindbergh's bold and fortunate transatlantic flight, is no malefic.

The individuated radical conjunction of JUPITER (29 Capricorn 26) with the MOON/MERCURY midpoint (29 Capricorn 15) may add some weight.

The more informative prenatal epoch shows the first magnitude fixed star BETELGEUZE (27 Gemini 23) conjunct NEPTUNE (27 Gemini 20).
A second brilliant fixed star REGULUS (28 Leo 27) conjoins MARS.
The close and problematic opposition of PLUTO (16 Gemini 25) on the ASC (16 Gemini 15) to URANUS (16 Sagittarius 07) generates at very least impusiveness and high tension. SATURN (16 Capricorn 19) in domicile aspects URANUS by semisextile and PLUTO by quincunx almost exact.

Directions for the arrest of Hauptmann, who kidnapped and murdered Lindbergh's child, are psychologically most instructive. Hauptmann's capture and imprisonment (event 9) is indicated by:
Cusp 12 c trine PLUTO
Cusp 12 re trine SUN

Lindbergh's satifaction by:
IC d trine MOON

Radix Interpretation

The most significant characteristics of any natal chart only come to light if the horoscope is first authenticated, and then rectified by primary directions, preferably to within one second of arc.

For Marilyn Monroe the conjunction of VENUS with the benefic fixed star MIRACH and the MC can only signify her fame (MIRACH), ability and success as an actress (VENUS) if this combination falls within one degree, as in our chart.

MARILYN MONROE

As the study of many lives has verified, the author must stress that the development and fate of a " first-class VIP" depends not only on the native's social circumstances at birth and environment during the first two decades of life, but also on what we call Destiny.
The sometimes unusual rise to fame is reflected by significant planets and appropriate fixed stars of the first and second order close to the angles of the birthchart. Generally we find in any radix that the native's chief characteristics are not shown by non-individual (ie non-personal) planetary aspects which remain in orb for days or even months, unless they contact the angles or house cusps.
This explains why tests, using natal horoscopes not properly rectified before submission to astrologers, have totally failed. For instance in one such test astrologers, asked to distinguish between charts of backward children and children with high IQ, achieved a success rate no better than chance. Hardly an endorsement of astrology's veracity !
In our horoscope of Marilyn Monroe SOUTH ASELLUS, a fixed star of the second order, gains importance by rising exactly, within one minute of arc. Having almost no latitude (0.4') it also forms an ecliptical conjunction with the ASC. Research shows this star to be of purely malefic nature. It has been connected in various positions with gas, drugs, infectious diseases such as diphteria and so on, in accordance with the symbolism of MARS and NEPTUNE. Tradition even speaks of blindness and violent death.

In the conception horoscope or prenatal epoch, the mighty BETELGEUZE, a benefic star of the first order, conjoins the ASC, while DENEBOLA, purely malefic, gives the SUN-MARS conjunction a destructive character. ACRUX, brightest star in the Southern Cross, conjoins SATURN. So far the author has no experience with this brilliant star of the first order, but perhaps its high south latitude(53º S), which renders it invisible in northern latitudes, makes it more effective in horoscopes of those born in the southern hemisphere.
Parans also strongly influence individual development. These are mundane conjunctions, oppositions and squares of planets measured in oblique ascension and descension. Their influence increases near angles, yet seems to disappear in other than the angular houses 1, 4, 7 & 10.
Our case shows the following effective parans :

A) MOON	rises at	15h 18m 47s Sidereal Time
NEPTUNE	sets at	15h 19m 07s Sidereal Time

This wholly individuated combination in angular houses, 1 & 7, configured by T-square with SATURN, has indeed fatefully fulfilled its promise in terms of the native's drug addiction, mental illness and imputed suicidal tendency. Note also the fact that by apparent motion the MOON reaches the SATURN-NEPTUNE combination first, while JUPITER, four degrees further on, can afford little salvation from her perils.

B) SUN rises at 21h 31m 46s Sidereal Time
MOON on MC (RAMC) at 21h 28m 39s Sidereal Time

This boosted Marylin's popularity and her relationships, especially with men, since the MOON occupies the 7th house and the SUN is near the 11th cusp.

C) JUPITER sets at 03h 20m 24s Sidereal Time
SATURN on IC (RAIC) at 03h 28m 39s Sidereal Time

Although JUPITER in the 7th house dominates SATURN in the 4th, their effect is divisive due to the aforementioned negative aspects.

On logical and empirical grounds, as demonstrated above, character and personality and inevitable fate are reflected only by astrological indications themselves of a purely individual character, restricted to seconds of time and birthplace coordinates.

Mutual planetary aspects are effective if connected with angles and intermediate house cusps. This occurs in Marilyn Monroe's horoscope with the MOON, MARS, SATURN and NEPTUNE.

Such mutual aspects take most effect during those periods when they mature by secondary measure. Aspects between slow-moving planets (JUPITER to PLUTO) may remain powerfully operative for years.

Alexander Marr

MARTINA and ANITA
IDENTICAL TWINS

The Dual Test and Identical Twins

by Alexander Marr

It took ten years to locate one particular conception chart. The attempt began in 1976 when the writer rectified the birth charts of identical twins born two hours apart. Their common moment of conception, however, remained illusive, seemingly impossible to determine until now-- although it was investigated on several occasions during this ten-year period. This was particularly frustrating as the conception day itself was clearly known: the twins' father had been at home on only one of the possible days, on 22nd May 1919, at all other times he had been away fighting the Bolsheviks at the relief of Riga.

During the same ten-year period, the writer was able to correctly identify many of other prenatal epochs. In doing so, he gained more experience and improved his abilities in this subject.

DATA :

1. **<u>BIRTHS</u>** (rectified) at 53º N 43' 12º E 34' 15" :
MARTINA : 13h 07m 44s UT, 1920, January 29
ANITA : 15h 08m 21s UT , 1920, January 29

2. **<u>PRENATAL EPOCH</u>** (rectified) at 56º N 57' 24º E 07'
1919, May 23 05h 54m 46s UT

Multiple births (twins, triplets, etc) are often born prematurely. here we have eight-month babies.

The three charts are illustrated overleaf.

Compare the common Epoch chart with the birthcharts of the twins *Martina* and *Anita*.

The Midheaven of the first born, Martina, is identical (within ' of arc) with the Moon at the time of conception.

In the writer's mind, this fact removes any doubt concerning the correctness of this epoch. This single result cannot be considered as a general rule; it should, neverhtless, be remembered in future situations of a similar type.

These twin sisters are now 73 years old. although they were born two hours apart, their characters and the events in their lives appear to have been very similar.

On most subjects their opinions are identical, they express themselves in the same manner both in speech and in writing. Despite living many miles apart, they are intimately connected with each other. The usual twin-test, performed on them at age twenty, gave almost identical results for all matters of psychological impressions and expressions.

Because of a two-hour interval between their births, the two natal horoscopes are shaped quite differently. These unlike birthcharts cannot be said, therefore, to explain the many similarities these identical twins have in common. Instead, the main indicator of these clear similarities has to be the conception chart, common to both sisters. Assuming this is so, it follows that the importance of the natal horoscope relative to the prenatal epoch has clearly been overstated by astrologers, both in past and today. (This premise is confirmed by the relative strenghts of *Ronald Reagan's* birth and conception charts. His Presidency is clearly shown in the prenatal epoch by the Sun-Moon conjunction at the Midheaven. By contrast, the very harmonious birthchart contains only a Moon-Jupiter opposition and a Venus-IC conjunction-- the latter aspect symbolizing his film career.)

The appearence of each twin is clearly watery. Both the prenatal epoch and the birthchart of Martina, the first-born, have a Cancer Ascendant. To a certain extent this also applies to the character and mentality of Anita.

Despite the many similarites, these two women had very different careers. Initially, being very attached to each other, they worked together on a ship (1940). After this, between 1941 and 1946, although still living together, their careers developed separately.

The younger sister, Anita, overcame great financial difficulties and the many problems of being a student in wartime Germany, to become a skilled medical doctor. She practiced successfully until her retirement in 1982.

Martina, with the same talents, attended al sorts of training courses. She had many jobs, but failed in every respect.

It is noted that a certain lack of mental stability has been observed in both sisters. Both have experienced several nervous breakdowns.

These career differences can be explained by the differing birthcharts:

Martina has a Cancer Ascendant and a Pisces Midheaven. Her mental approach is ingenious, unpractical and unsteady due to the position of Uranus, close to the Midheaven and the watery nature of the overall chart.

Both Martina and Anita have a talent for writing verse.

Martina cultivated this, although she failed to receive any financial reward ; Anita did not.-- Anita's career was successful because of her ambition and resoluteness. She has a Leo Ascendant, the Sun is angular, and Aries is on the Midheaven, for these reasons her approach to life was more practical and constructive than her sister's'.

Yet, at the same time, she did have to struggle with character handicaps similar to those of her sister.

All of the main events in the lives of each sister have coincided with appropriate directions in the prenatal epoch, as well as in the natal chart. Examples are given later.

Naturally both Martina and Anita have investigated this mystery of identical twins. They say that " It frequently happens that the twin who is born second becomes more ambitious than the first born".

This statement is surely due to some rather doubtful psychological theories. That it is true in this instance, is entirely due to Anita's fire angles (Leo rising and Aries culminating) by contrast to Marina's water angles (Cancer and Pisces).

Now, let's consider some similarities in the two sisters that cannot be explained by the two birthcharts, which differ so much in terms of shape and character. As constantly happens in the life of identical twins (this is an undoubted fact) their destiny-- the main events in their lives-- have been very similar, both in the type of event and in its timing.

Enough evidence has been published that shows identical twins do have a very similar destiny, even when living in entirely different parts of the world. Their deaths, for example, often occur within short interval (days) of each other, frequently from an identical cause. These are simple cases of predestination, a similar destiny.

Similarities

Both sisters married late in life, at ages 36 and 38 :
Martina on 5th May 1956,
Anita on 13th November 1958.
Both have two children, a boy and a girl, born in the same sequence.

Martina : son born on 10th July 1958 ; daughter on 21st June 1959.

Anita : son born on 28th December 1959 ; daughter on 7th March 1962.

The circumstances and development of the two marriages were quite different . This difference can be explained by the two birthcharts.

Martina married a man 21 years older than herself. He was born on 30th December 1899. The much older husband is best explained by her Capricorn Descendant being closely trined by the angular Saturn (orb 1º) and the absence of planets in the VIIth house. Saturn is also the so-called ruler of the VIIth house but the writer does nor approve of ruler and sub-ruler theories-- they are not reliable and often most misleading.

By contrast, Anita married a man ten years younger than herself. A marriage in which the woman is so much older than the man is rare. The writer has observed that unusual or excentric marriages often occur when there is an Aquarius Descendant. Here this is combined with an angular Sun in Aquarius.

Martina's husband died in 1970, at the age of 71. The marriage can be said to have been happy.(Saturn trine the Descendant). Family life did, however, suffered to some extent from the husband being too old to develop a satisfactory rapport with his children, who felt some lack and frustration in this regard. The family life is indicated here by Saturn on IC.

Anita's marriage, from its earliest beginning,developed in a most negative way. Her husband (Sun on Descendant) was full of fantastic ideas (Neptune opposition Sun) and was unsuccessful in all the many jobs and hobbies he pursued. Anita frequently had to pay for his more ventures (Moon square the IInd cusp). At the same time her husband was continually betraying her (Moon, Nodes and the Part of Fortune on the V-XI axis).

These are the most important facts concerning the sisters as individuals. Naturally they are backed up by the appropriate natal indications and, as will be demonstrated later, are reflected by significant directions.

As noted previously, each sister is a clear water type, both in appearence and in a psychological sense. Each is clearly an introvert,with little resistance against others, sensitive and disposed to headaches, depressions and nervous breakdowns. This can be explained by the prenatal epoch : Mercury in a minor aspect 75º, from the Ascendant, squared by Neptune. It is also noted that epoch Sun and Moon are in dual signs.

Main events the twins have experienced in common.

Having now examined more than four thousand events in rectified birthcharts and, to a more limited extent, in prenatal epochs, the writer has come to appreciate that single directions cannot be re-lated to corresponding events.

Instead, the main events in life are invariably reflected by a combination of primary and/or secondary directions. These combine together to indicate not only an actual event but also the circumstances surrounding it, together with its full psychological effect. A specific event may have both agreeable and disagreeable circumstances which can affect the native in varying psychological ways.

1. Emigration to Germany 1939, November 13

Martina		Anita	
VEN c sext **IX**	**R-R** 2' (orb) **	NOD d trine **IX**	R-E 2' *
NOD d trine JUP	**R-R** 2'	**SAT** d semisq **IC**	**R-R** 1' **
PLU d conj **ASC**	R-E 2' *	**(separation from parents)**	
SUN p sq XII	**R-R** 4'		

Epoch- Epoch (the same for each twin)

IX d trine **JUP** E-E 5' ** **ASC** p conj **SAT** E-E 7' **

MC c conj URA E-R 1' (orb) *

This event caused some excitement but also a certain sadness and a temporary separation from the parents. This latter is expressed by Saturn aspects to the Ascendant and the IC (family). The suddeness of the event is reflected by MC conjunct Uranus in both birthcharts. The epoch direction cusp IX trine Jupiter is appropriate, reflecting travel to a foreign country and the positive feelings and expectations.

1a. Reunion with the mother in January 1948

ASC c conj **VEN** E-E, ** for both twins

2. Death of brother killed in the war in March 1944, notified on 10th April 1944.

Martina			Anita		
MER c quinc **III**	**R-R**	9th March **	**MER** c quinc **III**	E-R	5th April**

URA c sesquiq **IC**	R-E	1st May			

Martina		Anita	
MON re conj PLU	R-E 4' *	**VIII** re sq **MAR**	**R-R** 5'**
DESC p sq MAR	**R-R** 5' *	NEP p opp **VIII**	**R-R** 3'**
PLU p semisq **NOD**	**R-R** 5' **	PLU p sesquiq ASC	**R-R** 5'*
NOD re sq **SAT**	R-E 3' **		

VIII d sq **MAR** 10th March **E-E** (Epoch -Epoch) for both twins

III, MERCURY = brother ; VIII = death of relatives; MARS = war ; NODE with SATURN = separation from realatives (often by death).

3. Death of father in 1946 (notified 16th April 1948) :

Martina				Anita			
MC d opp Pars F	E-R	2'		MAR d opp SUN	R-E	2'*	
MC p sq **PLU**	R-E	3' **		VIII p conj **SAT**	**R-R**	3'**	
SAT p quinc **SUN**	**R-R**	2' **		**SAT** p quinc **SUN**	**R-R**	4'**	
				VIII re semisq **SAT**	**R-R**	2'**	

Epoch-Epoch (for both twins) :

PARS F d conj NOD	E-E	3'	MC re opp SAT	E-E	6' **
ASC c conj PLU	E-E	6'*	VIII p conj URA	E-E	1' *
IX d quinc **SAT**	E-E	2'**	**MAR** re 90 **NEP**	E-E	5'**

Sun, Saturn, MC = father ; VIII = death of relatives; Node = separation from relatives IX = abroad.

4. Death of mother 1977, June 15

Martina			Anita		
MON d conj **MAR**	E-R	1' **	**MON** d conj **MAR**	E-R	1' *
PLU d conj **SAT**	R-E	3' **	SUN p sq **PLU**	**R-R**	5'
ASC re sq **VEN**	R-E	2' **	URA p quinc ASC	**R-R**	2'
SAT re sext ASC	**R-R**	3' *			
MAR c conj NEP	**R-R**	5' *			

Epoch - Epoch : (for both twins)
NEP c conj XII E-E 2' (mother's hospitalization)
IC d sq SAT E-E (mother's illness, Martina took care of her)

Naturally the death of a 91 year- old mother was not so painful as had been the deaths of the brother and father . The most appropriate directions are secondary regressed Ascendant square Venus and primary Pluto conjunct Saturn. These two directions in Martina's birthchart reflect the psychological experience she had as a result of taking care of her mother during the last months.

Similar events in the life of each twin

5a) Anitas appendectomy in July 1926 (15th assumed) :

Anita			Martina		
ASC c sq MA	**R-R**	2'**	DESC c opp PLU	**R-R**	7'**
JUP c opp SUN	**R-R**	2'	MON d conj MAR	**R-R**	7'*
(quick recovery)					
XII d opp PLU	**R-R**	2'**	XII c opp MON	**R-R**	1'*
MAR re sq ASC	R-E	6'	III p quinc MER	E-R	2'
IC re semisq MAR	E-R	6'			

Epoch- Epoch (for both twins)
MON d sesqui ASC E-E 1'

5b) Martina's appendectomy in April 1938 (15th assumed) :

Martina		Anita	
SAT c opp **URA**	**R-R** ex**	**DESC** d quinc **SAT**	**R-R** 1'**
NEP c quinc **URA**	R-E 1'*	**IC** d 150 **SAT**	**R-R** 1'**
XII d sext NEP	**R-R** 3'*	**XII** p opp **VEN**	E-R 2'**
XII p semisext **SAT**	**R-R** 3'**		

Epoch-- Epoch (for both twins)

URA d sesqui **ASC**	E-E 3' **	**URA** c quinc **IC**	E-E 3' **
NOD d sesqui XI	E-E 4'	SUN p semisq ASC	E-E 2' *

On each of these two occasions the twins report that they "suffered pain" when they where temporarily separated during the periods of hospitalization. This is clearly indicated by both the individual and the common directions.

Events in Martina's Life

6. Martina's marriage on 5th May 1956:

MC d trine **JUP**	**R-R** 1' **	MON d opp **V**	E-R ex *
IC c conj **JUP**	E-R 3 **	URA d semisext MON	E-E ex
JUP c trine **V**	E-R 3' **	**V** c trine MER	E-E 6' *
JUP p sext **V**	E-R 3' **	MON p sext **ASC**	R-E 2' *

SUN p trine **JUP** R-E 10' **

The directions for this event show most persuasively how decisive events in a life are indicated, and how these main events may now, with the discovery of the Dual- Test, be forecast :

a) by the characteristics of the various directions : the symbolism of the planets involved and the use of cusps (Topocentric System) as significators.

b) by the impact of synchronized main directions (orb, main aspects).

Aspects of the directed MC to Jupiter are very characteristic and frequent if the native's standard of living is improved by the marriage. This occurs for both men and women. Up until this time *Martina* had been unemployed, living in poor conditions. JUPITER = social position, financial improvements, expansion.

7. Birth of Martina's son on 18th July 1958 by caesarian section:

MAR c conj **IC**	**R-R** 7' **	MAR c quinc **V**	E-E 4' **
MON d trine **V**	R-E ex *	SUN d sq **V**	E-R 5'**
V d quinc **JUP**	E-E 1'**	SUN re sext MAR	**R-R** 6

IC p trine **MON** E-E 3' *

Here, as demonstrated some years ago in the writer's *.Prediction II,* p. 23 - 29, the following symbolism appears for births in most charts analyzed:
Vth cusp IC, ASC) for births ; Sun and Mars for boys; Moon and Venus for girls. Tense aspects, as shown here, reflect surgical interference and often, as here, an endangered life.

8. Death of Martina's husband on 30th October 1970

MC d opp **MAR** **A-A** 1' ** | PARS F c opp **SAT** E-E 1'*
MON c conj URA R-E ex | MON d opp PARS F E-R 4'
ASC p sq **SUN** E-E ex ** | MON p sesqui **MC** **A-A** 8'
SAT p quinc **DESC** E-E 1**' | **SUN** p sesqui **MC** E-R 2'**
MAR p quinc **MC** **A-A** 5'* | VIII re conj VEN E-R 8'
NEP p opp **SUN** E-R 2' **

The main direction here is primary MC opposite Mars. Progressed Neptune opposite Sun symbolizes that the husband was unconscious for the last two weeks of his life. Significators for the husband = MC(3); appropriate symbolism = Sun(2), Saturn(2).

Events in Anita's life

9. 5th May 1951: a) Final exam (Dr. Med.) b) Met "great love"

(a)

JUP re sext **III** E-R 6' ** | MON p conj MER E-E 3'
MC re conj URA E-R 5' * | IX p semisext URA E-R 3'

(b)

URA c conj **DESC** E-R 3' (b)** | **ASC** re semisext **SUN** **A-A** 2'(b)**
MAR p 30 IC **A-A** 4' **(b)

(a,b)

SUN p trine **URA** E-E 2'(a,b) *
SUN re trine **VEN** E-R 3' (a,b) *

10. End of long lasting love affair (9b) on 20th November 1956:

SUN d sq **NOD** R-E ex ** | **URA** d quinc **V** R-E 2' **
PLU c conj NOD R-E 3' ** | **MAR** d conj **PLU** E-E 1'**
MON re conj MAR E-R 6' * | VEN p conj **SAT** E-E 9' *

10. Birth of Anita's son on 28th December 1959:

URA d trine **ASC** **A-A** ex ** | NOD d sext **V** R-E 5' *
ASC d opp **URA** **A-A** 2' ** | MER c sext **V** R-E 5' *
PLU c trine **URA** R-E 5' | MON c semisext **ASC** **A-A** ex *
SUN re 150 **MAR** R-E 2'* | **ASC** re opp VEN **A-A** 1' *
MON re conj **IC** E-E 9'*

The suddeness of the event is reflected by the two URANUS-ASCENDANT primary directions. These are suitable for forecasting a birth. It is not, however, clear from the above directions that the birth of a son was to be expected. The many MOON and VENUS directions, which indicate the psychological effect of the event on the mother, may have led the astrologer to predict the birth of a daughter.

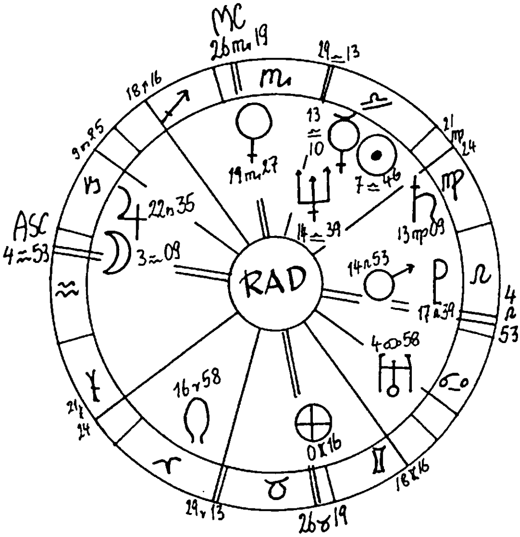

11. Birth of Anita's daughter on 7th March 1962

IC d opp **MON** **A-A** ex ** **V** d conj **VEN** **A-A** 2' **

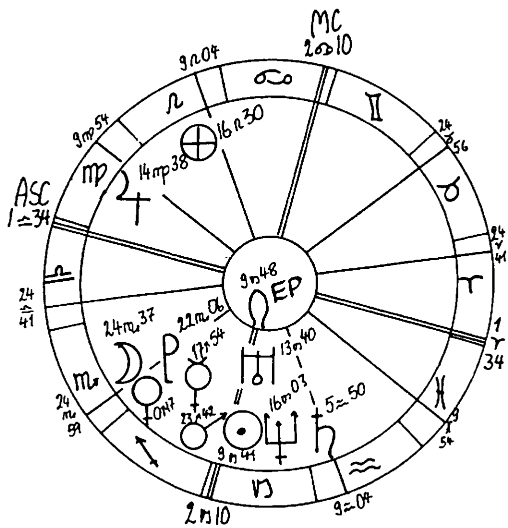

SUN p trine **NOD** **A-A** 1' SUN p conj **VEN** E-E 1'*

The two primary directions, IC opposite MOON and the Vth cusp conjunct VENUS, are characteristic directions for the birth of a daughter.

Postscript

William Lilly's method of finding the true time of birth by means of the conception horoscope or Prenatal Epoch, with the methods of ancient astrologers.

Lilly, W. *Christian Astrology* p. 581, Regulus facsimile ed. 1985

" The first way then of rectifying a Nativity, and reducing it to the moment of time when first the Infant was separated from his mother, and received the breath or ayre of this world, was by the TRUTINE or Scrutiny of HERMES (one of the wisest of all mortal men, and as ancient as MOSES)

and this way is farre more ancient then the ANIMODAR of PTOLOMEY, allowed by Ptolomey himself in his 51. Collocium (if that be his) as I undoubtedly conceive it is; his words are: What sign the MOON is in at time of the birth, make that very sign the ascendant at Conception ; and what sign the Moone is in when the Childe is conceived, make that Signe or the opposite unto it the Signe ascending at the Birth.

For HERMES was of this opinion , that the very degree of the same Signe wherein the Moon was at the conception of the Childe, should be the true degree of the ascendant at Birth . *This manner of verification, though it is of great use and much experience, will not in many examples hold firm ; not to a degree two or three, all the use I ever have or could make of it, was, that when an uncertain time was given me, or the time mistaken by an houre or two, it would helpe me* **to the sign ascending , but rarely to the degree ascending or neer unto it.**, *yet doe I know JUNCTINE doth insist much upon it, and produces many examples verified by it, which did concurre with the Scheames of heaven corrected by Accidents* .... "

*Some years ago, before I had read Lilly's book, I made the following statements, now supported by more than one hundred scientifically proven radix and epoch rectifications :

The radical ASC or DESC should correspond within a few minutes of arc with the MOON's longitude in the prenatal epoch, and nothing else.

Statements :

For those readers who have not read my five books I here restate the most important astrological rules to have been formulated during the last forty years :

1) Only those astrological systems based upon sound astronomical foundations are true and valid.

2) The Solar-Arc in eclipto, being one-dimensional, is wholly fictitious, articulating itself in orbs too large for proper control, and often through dubious symbolism.
3) All charts for individuals must be computed and delineated in the Tropical Zodiac.
3a) This holds equally true for Solar and Lunar cycles where precession or recession has been applied.
4) The astrological systems demonstrated in my books stipulate strictly limited orbs and correctly applied symbolism. (Given the availability of a sufficient number of events, the eradication of the coincidence factor step by step towards virtual certainty renders these astrological systems of serious scientific value.)
5) The traditional significator-promittor theory is invalid.
(see Marr, A. *Prediction II,* p.18).
6) Planets retrograde, stationary or much reduced in apparent motion, maintain unchanged their constant symbolism and character, but with a tendency to generate a higher dynamic of longer efficacy.

Theory and Hypothesis**

Having studied astrological symbolism for over 40 years, I came to the conclusion that there are still two planets to be discovered.
One for Virgo(jobs,employees,rote method, compulsive precision), as the counterpart of PISCES and NEPTUNE ; the other for LIBRA(contracts,air and space travel, equilibrium overcoming the force of gravity) as a counterpart of ARIES and MARS.
The statements of the ancient giving the Luminaries one and the planets two signs are overruled by the fact that three new planets have been discovered since.
On the other hand, the true symbolism of planets and the tropical signs cannot possibly allow any planet to belong with a second sign.
For instance : SATURN is incompatible with AQUARIUS as well as with URANUS. JUPITER "the judge" has nothing in common with PISCES or NEPTUNE. MERCURY "the lawyer" has nothing in common with VIRGO. Furthermore the masculine planets become feminine, and vice versa, if one follows the traditional rules. CHIRON, carefully tested in rectified charts, does not produce any truly effective directions in the Primary as well as Secondary directional systems.
The omission of "? two still undiscovered ?" planets could be the reason for the lack of MDO congruencies, both for rule 3 and 3a in about 20 percent of cases analyzed.

**My hypothesis may have been validated by the recent discovery of US astronomers .
J. Luu and **D. Jewitt** at Berkeley, discovered two small planets, tiny bodies orbiting the Sun in the outer regions of the known Solar System. Presumably they have almost no latitude.

<u>1992, Q.B.</u> May perhaps rule **LIBRA**
1992, Oct 15 **RA =359º 28' DECL = - 8º12.5 ´** Around **29.5º Pisces**
Retrograde slow motion 3 " per hour

<u>1993, F.W.</u>
1993, March 28 **RA = 186º 47' DECL = -3.88º** Around **8º Libra**
Retrograde slow motion 3" per hour

1993 F.W. may perhaps rule **VIRGO.** In my radix 1919, April 12.
It has **MDO rad 39º 43' (First Quadrant in Gemini ?)**
and

1992, Q.B. eccentricity between **37** and **59 A.U.**
1993 F.W. " " " **38** and **56 A.U.**
PLUTO " " " **39.**457 **A.U.** (average)
1 AU = average distance Sun to Earth =149.597870 million km

****Predicted in *Astrologers , Kings, Politicians* and *Others* page 3, and repeatedly elsewhere in lectures.**

It is interesting to relate the order of the 12 signs of the Tropical Zodiac to the distance from Earth of the now 12 main celestial constituents of the Solar System. The following possible arrangement trisects the Zodiac
Clockwise :
(SUN = Leo neutral)

MOON = Cancer neutral nearest to the Earth
MERCURY= Gemini neutral
VENUS =Taurus benefic
MARS = Aries malefic

JUPITER = Sagittarius benefic
SATURN = Capricorn malefic
URANUS = Aqaurius neutral
NEPTUNE = Pisces malefic

PLUTO = Scorpio malefic
1992 QB = Libra benefic
1993 FW = Virgo benefic, furthest from the Earth
SUN = Leo neutral

We formerly had : 4 neutrals ; 4 malefics and <u>only</u> 2 benefics
This way we now have 4 benefic planets.

A Philosophy Revitalized

Since the birth of humankind people of all races have pondered the meaning of life, creating in the process all manner of philosophies and religions. Those that took root have in turn sprouted countless sects, different ways to worship God.

For many years I believed it was only possible to determine the outcome of events from dates fixed beforehand, or on a speculative basis, such as the death of old or fatally ill people. Meanwhile revolutionary developments in astrology have reached a stage where logically we must seriously reconsider the notion of predetermination, or what we call fate.

There is plenty of evidence of accurate prophecy. The following prediction by Nostradamus in his *Centurions* speaks for itself :

Hitler will be desiuely defeated hy the Red Emperor of Armenia near Coelln.

" The Red Emperor of Armenia " surely refers to Stalin who was of Georgian origin. In Nostradamus' day Coelln was a smal village, now incorporated as Neukölln in the suburbs of Berlin, which did not then exist. Any accurate prophecy implies of course that all events preceeding its fulfilment are somehow programmed to occur in their inevitable order.

The revolutionairy developments in astrology mentioned above now provide cogent and abundant evidence that major events can be traced through characteristic primary and secondary directions, supported by other proven astrological systems. My books offer numerous examples of major events in the lives of natives, such as births, marriages and death, prefigured in rectified horoscopes.

Another most evident phenomen is the fact that places fortunate or unfortunate for the native, in the astrological sense, are constantly the scene of respectively fortunate or unfortunate events in his or her life.
For instance Boris Becker has always enjoyed luck when playing lawn tennis at Wimbledon, winning three championships. By contrast Ivan Lendl, No. 1 seed for 270 weeks, has never won the annual Wimbledon championship in ten successive bids.

Any experienced astrologer knows that the actual place of residence frequently decides the native's fortune or misfortune. Yet clearly the native's fortune and misfortune do not simply take place in space.

They also take their cue from appropriate astrological indications, mainly transits and cycles at the time of the event. This" duplicity of happenings" witnessed in the analysis of many nativities, defies the mathematical laws of probability. Hence we are not dealing here with simple coincidence.

Destiny, as evidenced by a host of accurate predictions, bears an indubitable relation to what we call fate. May i humbly beg the reader to give serious consideration to this issue, which has preoccupied so many of our forebears down the years, though within the narrow confines of our three-dimensinal space we cannot by our nature free ourselves of a sense of responsibility for our actions.
